Sir:

Attached are completed Form PTO/SB/08A and Form PTO/SB/08B.

None of the references show method of producing an enveloping worm including generation of an enveloping worm thread surface by a cutter rolling around a base circle on a cutting plane with simultaneous rotation of an enveloping worm blank around an axis of said enveloping worm, where a cutting edge of said cutter furthermore rotates around a tooling axis. A radius of rotation of said cutting edge is equal to or bigger than maximum radius of convex curvature of said worm thread and radius of rotation of said cutting edge is equal to or smaller than maximum radius of concave curvature of said worm thread.

None of the references show an enveloping worm blank rotating around an axis of the enveloping worm blank and the enveloping worm blank has relative motion around tooling axis to helical cutter. The helical cutter furthermore has linear motion normal to a cutting plane. Helical's cutter and enveloping worm's blank relative motion around tooling axis can be done by helical cutter rotating around tooling axis with simultaneous rotation of enveloping worm blank around its own and tooling axes or by only rotating enveloping blank around its own axis and tooling axes.

Very respectfully,

Applicant _____
